

Metal Mesh Solutions

METAL SOLUTIONS

U EDGING

BASIC

Mesh suspends from a single bar, either welded from the inside or with mechanical connection: all hardware flush with the surface.

OPEN EDGES

Mesh edges remain visible. Hardware may be added top and bottom to keep flexible mesh taught floor to ceiling.

FRAME

Fully enclosed mesh paneling. Available with sound absorbing backing serving both aesthetic and function.

CURVED

Formed U-edging is a great solution for ceiling applications to create shimmering installations that play with space and light.

FLAT AND ANGLED

BASIC

Available in any metal, the angled material conceals a clamping bar, blind tapped, for grabbing most any metal mesh.

OPEN EDGES

Make a statement with very fine or very wide angle profiles finished in stainless steel or copper alloys, powder coated, mirror finished or patinated.

FRAME

The sharp edges of this frame style call attention to decorative wall pieces composed of fine european metal mesh.

CURVED

Bending metal angle is a unique value proposition that few organizations have mastered. We are pleased to offer just such a solution.

FLATS W/ CLEVIS

BASIC

Two clamping bars with flush surface hardware comprise this metal mesh solution. Ornamental U-shaped hardware capture the two flat bars with a sleek through hole pin.

OPEN EDGES

For lightweight partition screens, request a spring loaded solution for lighter weight meshes that will divide space yet maintain its openness.

CURVED

Play with architectural space – if you can design it, we can form it.

EXTENDED LOOP WITH EYE-BOLT

BASIC

An ideal solution for cabled mesh, extra long legs of the mesh are crimped around a hanger of round bar. Eye-bolts assist in suspending the fixture from the ceiling.

OPEN EDGES

Stabilize your installation for unobtrusive crowd control with a matching bottom leg. Ensure safety with premium ornamentation.

CURVED

Round bar is the easiest of all profiles to form. This solution is ideal for your wildest curvilinear designs.

FINISHES

NATURAL COLLECTION

Metal mesh is a premium architectural ornamentation that can simultaneously serve many creative functions: organizing space, interacting with light, and acoustical control. Our hardware solutions seek to match that same level of craft and creativity that go into making woven metal patterns. Please see below a selection of available hardware finishes that will punctuate the architecture and highlight your design .

POWDER COATED

Tougher than conventional paints, powder coating is an electrostatic application of pigmented dry powder that is baked onto the surface of the metal. While powder coating conceals the natural grain of the metal, it leaves behind a durable and weather resistant finish. Available in any color, the best reference when ordering is to use RAL color codes. Below is a selection, and you can find the full RAL color code list [HERE](#).
